

iDSP Audio System EQ & Tuning Kit

Take your listening experience to a whole new level with iDSP. Custom tune your audio system to perfection using your iOS or Android device. Even with high-class speakers and subwoofers, the complexity of room acoustics can cause nonlinearities in audio signals once the sound bounces around your room and eventually reaches your listening position. Room reflections combined with the direct sound from a speaker will usually create a misrepresentation of your audio signal, meaning what you hear is not the same as what the recording /mastering engineer heard in their studio. Phasing issues are especially true with the very long wavelengths of bass frequencies, as they wrap around the whole room and then eventually find their way to your listening position. Room reflections are the main reason that recording engineers go through the extraordinary effort with room treatment, speaker placement, and sometimes precise EQ to make their studios and speakers have a flat response as possible.

FEATURES

- X-Over Control
- Gain Control
- SHS Control
- Delay Control
- Phase Control
- Limiter-Compressor Control
- Dynamic Bass Control
- Remote Hardware Control
- Preset Manager
- Preset Import/Export Features
- Room Correction
- SPL Meter
- For iOS & Android Devices
- Power Supply & Cables Included
